Advantage:

-Use the Turbine worm gearbox. No need the belt and wheel, ice cream can be more cold and hard, will not have the belt burn and loosen problem, also no Vibration caused by belt drive, very much low noise.

-With large cooling cylinder, the old model cooling cylinder diameter is 89mm, but new model use 102mm diameter cooling cylinder which hold 2.5Liters mixture. Better over-run and large production, also user can put the hand inside the mixer to clean.

-With new high efficiency stainless steel mixer. With this mixer machine can produce ice cream continuously, this mixer design is like the continuously freezer, this mixer more durable and easy to clean, which can disassemble a part to clean it.

-All Turbo series model included pre-cooling and keep fresh system
