Production procedure:

The film will go through the printing part first to print logo , the next is gluing part, after printing ,gluing directly ,then coated film will go through the drying part to dry the glue to be sticky,the last step is rewinding the sticky film to be transparent &color &logo jumbo roll.

Machine feature:

1. Windows opening :at oven both sides for cleaning & easy checking .
 2. Max Two color engraving printing.
 2. Power: 2 motors with inverters controlling speed changing.
 3. Coating glue : automatic comma blade transfer coating head .The doctor blade can remove extra glue from the coating roller.coating thickness can be adjusted according to production needs & showing on tester.
 5. Drying oven : Inbuilt water tank heating by electricity with draught fans for efficient hot air circulation in the oven to increase the drying speed,more faster speed and cost saving .
- The longer the drying oven is, the higher efficiency & production will have.
6. Temperature control: segmented automatic temperature control. When the temperature reach the set temperature, it will stop heating, when becomes lower, will start working again.
 7. Inflatable shaft rewinding,magnetic powder brake tension controlling.
 8. EPC for right direction of film walking & flat rewinding edge of the tapes.
 9. Transmission system : two motors ,using air compressor topneumatically control main machine devices with air pipe system,greatly improve the easy auto operation and printing & coating effect.
 10. Separate electricity control cabinet .
