working principle:

Manually transport the bottles from the bottle storage to the hopper, hoist the bottles through the belt and arrange them into the bottle trough, and then enter the large bottle sorting rack through the guide bar through the guide rail. The bottles flip and slide down from the large sorting rack, enter the air conveying track through the star wheels, and then enter the bottle chain conveyor. The whole process is controlled by PLC. The machine consists of a bottle storage bucket, a lifting belt and a frame. The elevator structure motor is controlled by the feeding detection device of the bottle unscrambler. The bottle discharging mechanism is composed of a host, a bottle rack and a star wheel. The machine sends the bottles into the bottle rack, the bottle rack sends the inverter bottles into the correct direction, the bottles into the star wheel, and then the bottles into the air conveying track.

technical parameter:

Model: LPJ-2000

Ability: 5000-8000 bottles/hour

Bottle height: 50~280 mm

Power supply: AC 220 V, 50-60 Hz

Total power: 5.5kw

2. Into the bottle air duct

- The air duct is supported on the ground by a tripod, and the fan is installed on the upper part of the air duct. The bottle is stuck in the bottleneck by the bottle hanging plate in the air duct, and is conveyed to the bottle washing machine by wind.
- 1. Main features
- Except for the plastic and nylon parts such as the feet and bottle hanging boards, the rest are made of high-quality stainless steel.
- There are multiple sets of photoelectric switches on the entire air duct. The photoelectric switches near the cross air duct are used to control the direction of the cross air duct of the air duct, and the other photoelectric switches set on the air duct are used to control the settings on the air duct. The action of the automatic bottle dropping device controls the smooth operation of the entire air duct.

- 2. Technical parameters
- Fan model: FS type
- Fan power: 0.55KW/domestic well-known brand fan; wind pressure $\geq 0.5\text{kg/cm}^2$, ensure the stability of the bottle body when conveying, and the noise when the fan works ≤ 70 decibels
- Air conveying line conveying speed and efficiency: 7000bph, efficiency $\geq 99\%$
- Air duct material: hanging bottleneck conveyor, material is SUS304 polished panel, thickness 1.5mm

3. Filling Machine

The plunger filling unit produced by our factory is a new product developed after many years of production experience based on the introduction, digestion and absorption of similar products at home and abroad. The unit is a combination of two single machines for washing and filling. , Driven by a drive motor (referred to as two-in-one filling machine). It has the advantages of high degree of automation, compact structure, beautiful appearance, convenient operation and maintenance, safety and reliability, and continuously adjustable production capacity.

Device Description:

1. Main technical parameters

Model: GF24-8 Production capacity: 5500-6500 bottles/hour

Working voltage: AC380V

Control voltage: DC24V

Washing water pressure: 0.18 MPa

Compressed air pressure: 0.6 Mpa

Compressed air consumption: 400L/min

Air consumption: 0.6m³/h

Dimensions: 2700×2300×2300 (mm)

Weight: 4000KG

Inside details of the filling machine

Filling head

<1> 304 stainless steel high-precision filling nozzle

<2> Filling volume can be adjusted finely, the liquid level is the same after filling

<3> 304 stainless steel contact parts and liquid tank, polished finely, no dead corners, easy to

Capping machine

The upper cover processing device is installed on the top of the screw cover part, and the straightening cover goes down the network. Scrape the cover when sealing, and the position of the cover is accurate to ensure the quality of the cover. The cover is blown into the top of the cover by the feeder through the wind, so that it is easy to cover.

4. Automatic sleeve labeling machine

The automatic sleeve labeling machine is one of the complete equipment of the drinking machine. It is installed on the solid bottle conveyor belt after the filling machine or spraying machine. Its function is to automatically set the label on the solid bottle filled with the beverage, and then shrink it. The labeling machine collects and affixes the heat shrinkable film label to the bottle body to complete the shrinking process of the product label. It is mainly used in food and beverage packaging lines, as well as external shrink film packaging for cleaning supplies, condiments, wine, cosmetics, refined oil and pharmaceutical industries.

1. Performance introduction:

1) The fastest scanning speed is 1,200 characters/second (depending on the application), the fastest line speed is 10 meters/second, the scanning area, static printing is about 44X44 to 177X177 or 226X325MM (optional), and the number of printing lines is unlimited, Mobile printing height is about 44 to 177 (standard) or 325 (optional), unlimited length, unlimited number of printing lines.

2) Print format, standard font, such as high-speed font or OCR, machine readable code, QR code box format, non-box format: ECCplain [custom configuration ECC code], graphics, logos, symbols, etc., linear printing, arc Shape printing, bevel printing, rotation, mirroring, enlargement, compression and other printing functions, sequence printing and serial number printing. Automatic date, layer and time code, clock printing, etc., online coding printing or individual data printing (weight, content, etc.).

3) Laser tube, sealed CO2 laser, power 10W, beam reflection system, digital high-speed scanning head, optical focus, precise optical lens, standard cold focal length.

4) The handheld keyboard and the graphical remote controller connected via Ethernet make the operation more flexible. It can print information, status and warning display, and the graphical display interface is clearly visible, fast and intuitive.

5) Software, chart wizard based on Windows 2000/XP, user interface installed on the PC, can complete the complete print job intuitively and quickly, languages: German, English, Chinese, Japanese, Russian, Arabic and many other languages: Yes Free choice, can use chart files in multiple formats, including standard chart editing programs. WYSIWYG, multi-level protection, graphical display interface is clearly visible, fast and intuitive. The software interface can be easily integrated into the customer's operating software.

6) Product detector and synchronizer inputs, 3 inputs/7 outputs including on/off signals, as well as I/O expansion functions, and solutions can be customized according to user requirements.

7) Integration, through the laser machine's own interface can be directly integrated into the complex production line, through the Ethernet (TCP and UDP) and Rs232 interface integration, flexible beam transmission device options.

6、Solid bottle conveying system

The new structure, most of the components are stamped and bent to form, with good rigidity, light weight and good interchangeability. The transmission is inverted and directly connected, which is reliable in operation and convenient in maintenance. It is suitable for conveying bottles with a diameter of $\phi 40 \sim 110$ mm.
